

What will users look for when using a banking web?

#### Priority ranking

1. Sense of trust and faith (no sketchy-ness in UI)
2. Easy to use (Simple design, easy to understand the logos)
3. Loading page (To give a sense that the page is loading, allow users to differentiate between loading error, page freeze and login error?)
4. Troubleshoot link (Hotline links)
5. Keep function texts within 3 words
6. Blue themed interface (psychological effect of trust, serenity, peace to create that worthiness)

Log In

A hand-drawn wireframe of a bank login page. On the left, there is a rectangular box labeled "Bank Logo". On the right, there is a vertical stack of three input fields: the top one is labeled "Account ID", the middle one is labeled "PIN", and the bottom one is labeled "Log In". Below these input fields, there are two small rectangular buttons: the left one is labeled "Forgotten Password?" and the right one is labeled "Troubleshoot".
